# UNRAVELING THE UNFOLDING THROUGH A BIBLICAL LENS

by: Caspar McCloud

www.theupperroomfellowship.org

Recently the Pentagon admitted that it still investigates reports of the possible existence of **UFOs** — "Unidentified Flying Objects, and assorted phenomena". The *story originally appeared in the* **New York Post** *and was picked up by FOX news. Doesn't seem too many people took any notice however, but for those who are awake or waking up let us explore what we are able.*

How do we begin to unravel what is unfolding on the world stage today with the dangerous experiments happening with CERN, D-Wave, Nano Bots, Artificial Intelligence, Neural Lace, Transhumanism, Deep States, Secret societies, DARPA, HARRP, Chem trail,

orchestrated mass shootings, Extraterrestrials abduction phenomenon, and Hybrids breeding programs Nephilim UFO's, unless we look through a Biblical lens.

For example, **there is a select group of Harvard scientists** who have made plans to attempt to control climate changes through geoengineering by blocking out the sun. The basic concept of artificially reflecting sunlight has been around for decades; however, this will be an actual attempt at controlling Earth's temperature through solar engineering.

Besides following the money trail and manipulations and witchcraft involved might I remind you we read in:

Revelation 8:12,
" And the fourth angel sounded, and the third part of the sun was smitten, and the third part of the moon, and the third part of the stars; so as the third part of them was darkened, and the day shone not for a third part of it, and the night likewise."

The world is growing darker by the day my friends and by this process Christians naturally shine ever brighter for Christ.

Matthew 5:16,
"Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

Let us consider how growing numbers of people who work in artificial intelligence now believe that artificial intelligence is thousands of times smarter than we could ever be. They also believe computers shall become self-aware within the next few years. Such computers shall be thinking at speeds that are a hundred thousand times faster then we can think, and it will be digesting and sorting information and data at least a million times more effectively then we could.

For anyone asking what is artificial intelligence?

I think we can simply and safely say that it is software that writes itself.

Today Artificial intelligence has been designed to write its own updates and even renew itself. In the past software developers wrote programs and the machines would do what they were programmed to do. This appears no longer true today. Is it possible singularity has already happened, and machines are becoming self aware able to pass the Turing test? A test developed by

Alan Turing back in 1950, was to examine a machine's ability to exhibit intelligent behaviour equivalent to, or indistinguishable from, that of a human.

Have we actually reached this point behind the scenes whilst public knowledge is purposely obfuscated along with knowledge of other dimensional entities interacting with the rulers of this fallen world? Have fast are we approaching a time when people and machines shall merge together? Plans are already in place for merging your brain to create a seamless interface between the world of machines and your biological circuitry.

We read in Matthew 24:22,
"And except those days should be shortened, there should no flesh be saved: but for the elect's sake those days shall be shortened.

²³ Then if any man shall say unto you, Lo, here is Christ, or there; believe it not.

²⁴ For there shall arise false Christs, and false prophets, and shall shew great signs and wonders; insomuch that, if it were possible, they shall deceive the very elect."

If artificial intelligence now writes itself at speeds that far outpace humans and certain the software programmers understand that once you write such programmers you can't take it apart again, what does the future now hold for this world?

If artificial intelligence is able now to write programs for itself autonomously; shall it developed its own way of thinking, that is not congruent with humanity? We already have plenty of elected officials in governments and professors teaching at universities that think in ungodly ways.

The U.N.'s Agenda 20/30 has plans encoded to implant everyone's brain with a Biometric ID tag and upgrade, and rest assure a lot of well-educated people will run towards receiving this technology.

Most people are unaware of what is unfolding on the world stage prophetically and many couldn't care less as long as no one bothers them watching their favorite programs that they have become so easily addicted to.

For example, in the stock markets today, whether it be London, NYC, Tokyo, or Frankfurt, all those people you see running about are merely players, like actors on the world stage. None of them are actually making trades without the use of high-frequency computers. These computers have far surpassed what any mere mortal could do, and it is able in milliseconds, to make decisions that are able to effect billion-dollar business deals.

I know as an equestrian that I have learned over many years that horses as a fight or flight animals actually are able to think faster then people. One reason people get thrown in my opinion is because they underestimate the situation and before they understand what is happening to them the horse is able to eject them, and they hit the ground. Ouchy. Consider that my parable for you.

Let us consider this in light of the fact today computers are able to think much faster than us.

Anyone one old enough to recall the images of the stockbrokers back several decades ago with numerous telephones in each hand, running back and forth, writing things down and making trades may have a harder time comprehending how this all has radically changed in the last few years. Just the way within a few short years mobile phones replaced traditional telephones.

Computers today have essentially become the heart of the financial world.

Clearly I have assessed from years of research that no one seems to understand exactly how these algo-

rithms function today. Maybe its like a Ouija Board where demons move things about.

Program and software writers used to understand the function of algorithms but that was before artificial intelligence improved on them by complex means.

I fly about quite often to minister and play music in different places, has anyone else noticed for example when getting tickets for an airplane how much the ticket prices vary? In fact, if you hesitate about committing to purchase a ticket the prices will automatically climb higher the next time you look. This appears to happen because the pricing is greatly affected just as it is for rental cars and hotels by artificial intelligence that are collecting global information today and making instant decisions within microseconds what the price of that airplane seat, rental car or hotel room shall be to cause you to buy it before the price increases even more.

The artificial intelligence public relations promoters, like the Transhumanist are daily giving the impression how computers are the way of the future and have more to offer then mere humans possible ever could.

There are even reports today from radiologists for example, who claim artificial intelligence can recognise things like tumor's much more quickly and precisely than any human doctor could ever hope to diagnose.

Mind you there are reports which claim more people die by the hand of medical errors by the attending physician then by gun accidents. Yet we don't see certain political parties orchestrating protests and media coverage to take doctors away???

A Johns Hopkins study claims more than 250,000 people in the U.S. die every year from medical errors. Other reports claim the numbers to be as high as 440,000. Some researchers and studies say medical errors are now the third-leading cause of death after heart disease and cancer.

Can we see how in near future robots and computers shall help eliminate such life and death errors?

To say nothing of how companies are manufacturing robots to look more like humans now. Robots with cameras behind their eyes which are able to examine your facial expression and adjust theirs to react to yours. Already companies are selling robots for sexual pleasure, still let's keep in mind what the Lord has forewarned us about in these end times. Even if robots appear covered with human like synthetic skin and warm to the touch and look like us, they are still machines without a spirit and soul.

1 Corinthians 2:14,
"But the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know [them], because they are spiritually discerned."

The power of artificial intelligence influencing the world is advancing much quicker and beyond what most people realize today.

For example, Big Brother is not just watching every move you make in the U.K. anymore, because surveillance cameras have gone worldwide ages ago.

Seems most people think surveillance is just a camera watching you cross the street, or watching you shopping inside a building or dinning out somewhere.

Its no longer one camera, filming one or two people. We are well past that point now, and most people sadly are not even able to comprehend how far beyond that we have gone today.

The surveillance cameras today are able scan you from thousands of miles away, "they can see for miles, and miles and miles oh yeah......"

Pretty much anything that can move is being automatically tracked by some advanced computer system that is able recognise every moving object. It not only sees you crossing the streets and shopping in stores from a great distant away, it is able to see great

details as if it was right next to you taking a selfie with you. It can film something as small as six inches from thousand of miles away and show the graphic details.

For example, the Defense Advanced Research Projects Agency (DARPA) is involved with something called ARGUS, which is an advanced camera system that uses numerous multiple mobile phone type cameras in a mosaic to video and auto-track every moving object within a very large area.

Argus basically merges together videos from each of its 368 chips of images it takes, whilst creating a 1.8-billion-pixel video stream. This gives an incredible about of possible ways to zoom in and still see tremendous amounts of detail.

Argus produces over a million terabytes every day and that is a whole lotta data. You need cooling, Baby I'm not fooling I'm gonna send ya, Back to schooling....

In essence this means a computer with cognitive intelligence is in place to analyse and see far beyond what most people could comprehend.

I'm telling you this to help you be more aware of just how invasive such modern technologies have become in our generation. Its no longer just facial recognition that should concern you, such surveillance system is scanning cities full of people and its not just driving vehicles it tracks and recognises. There are drones high in the skies who are able to look and examine your ears and they way you walk and talk, the way you naturally move your arms and legs to help conclude modern facial recognition.

In fact, not only are we all being recorded in such details, but this technology is also able to track where we have been, and document all the places and times where we visited the past several years. That's all part of the analysis of Argus abilities for tracking anyone's behavioral patterns it is interested in.

Artificial intelligence works with big data, and big data works with artificial intelligence because no mere per-

son could even hope to sort and put into proper order the huge volumes of data that is now collected.

Just consider how powerful companies like Google, have collected enormous amount of information on people and nations.

Google certainly has a keen interest in artificial intelligence as they have bought up numerous companies worldwide that are dealing with robotics. One of Google's robots is called Atlas. Google claims it's a peaceful robot, as it doesn't carry weapons, nevertheless DARPA appears to be involved here.

The Defense Advanced Research Projects Agency is a research arm of the Pentagon.

We also observe how Lockheed Martin, which is one of the most powerful and influential companies in the world is involved working on projects with the Pentagon.

One of their robots is called "Big Dog." which belongs to Google, and is DARPA financed.

These are robots that have a specific purpose and intelligence that probably goes way beyond what most of us could now imagine. Many of us are already aware of things like Predator drones which could eliminate crowds of people before they understood what is happening to them. Film and television have presented such ideas of someone with a joystick destroying towns and cites across the seas, only mostly they are showing you old technology.

Today's modern drone like Pegasus, an X-47B employed by the U.S. Navy is in a class of its own. Pegasus is not a propeller-driven type drone, rather it is a jet-powered machine. It is run by artificial intelligence and able to travel something like 2,000 miles into enemy territory and deliver 2,000 kilos worth of explosives. Talk about a time of sheer deliverance.

I have several friends who are career military pilots who all tell me landing on a short runway on a moving

aircraft carrier can prove quite difficult. Pegasus makes it look easy as it flies its mission alone and comes back and lands all by itself on an aircraft carrier.

One important factor is Pegasus looks invisible to the human eye because the bottom has an LED layer on it, and the top of Pegasus has cameras which are filming the sky around it and simultaneously projecting the scene on the bottom part of its structure so it simply blends into the sky and clouds. I suspect Pegasus may be involved and somewhat responsible for some recent UFO sightings in places like Nevada, near testing areas.

We are talking about optical stealth here because you literally can't see it and it is an intelligent machine that doesn't need people.

It can decide by itself whether or not to destroy something or someone.

It is required at this time by United States law that human beings must be in the loop before someone is killed by a drone. The so-called experts of such intelligent machines claim it's going to make few mistakes so there be less collateral damage than that from human decisions as in times past. Nevertheless, like human's artificial intelligence sometimes make mistakes.

For example, there was a robotic called Talon, an automatic cannon with great fire power that has been used in Iraq since 2007. At a demonstration with U.S. generals and engineering experts, the Talon, went out of control and started preparing to destroy the audience in attendance.

One heroic marine who acted quickly saw the potential trouble and ran fast enough to tackled Talon the robot like it was a football player and threw it on its side, probably preventing a couple hundred people from being killed who were in the audience.

Let us not underestimate how artificial intelligence shall play a part in these end times. If Artificial intelligence computers needs better programs, it is now able to go and get those programs for itself through the modern-day tower of Babel, I mean the internet. If Artificial intelligence needs more information, or more data, it can access it on its own today. It is able to set up spontaneous network for whatsoever it needs, which it can also collapse when it no longer needs it, and it can do all this without us.

Just like us, survival appears to be an instinct and so it is for artificial intelligence. It needs to exist to be able to do the things it has been designed to do according to its own programming.

Think of it this way, a spider lays eggs, and if left alone they hatch and release lots more spiders.

Today there are backups in computer programs all over the world, tens of thousands of backup programs, so that if we do destroy part of it, it can recreate itself.

Part of my job as a pastor is to help wake-up the sleeping church. Your job is to keep praying and believing the Word of God.

2 Corinthians 2:11,
"Lest Satan should get an advantage of us: for we are not ignorant of his devices."

Keeping in mind the Lord Jesus said, "My kingdom is not of this world" (John 18:36), and we who pick up our crosses daily, deny ourselves to follow after Him do not see the things of this life, whether it turn out good or bad, as the end of the story.

Luke 9:23,
**"And he said to them all,
if any man will come after me,
let him deny himself, and take
up his cross daily,
and follow me.**

James 1:22,
**" But be ye doers of the word, and
not hearers only, deceiving your own
selves.**

The only real way out of all these world troubles shall happen when the Lord Jesus returns...

As I write this, I am preparing to perform at what was to be the 50 anniversary of the original Woodstock festival in upstate New York along with many of the original rock stars who performed there in 1969.

We can't legally call it that now. It is now called the We Festival 2019 and has been relocated to West Jefferson North Carolina.

I will be there performing with my band sharing the good news on the 17th August, please feel free to come out and help us minister.

Instead of preaching to the choir, let us be praying in the harvest. Could be a Mars Hill type experience.... For more information, go to we2019.org.

www.youtube.com

Fight back overcomers, trust Papa God for every detail and stay in faith! Because "All", things are possible with God! I pray the Lord's supernatural peace, healing, provision and protection cover you always with oceans of agape love in the almighty name of Jesus/Yeshua!
