The patients thank you for your generous donations towards their important imaging scans through the Tidwell Fund for Guatemala!

38-year-old patient who needed a CT scan after an Ultrasound that showed possible liver cancer. This was confirmed through the scan.

17-year-old patient in the intensive care unit who was just removed from intubation due to a complicated pancreatitis. He needed a CT scan to follow up, he now has some fluid build up in his lungs, but his pancreas is improving.

8-month-old malnourished infant who was born with a small head and isn't able to eat properly. Mother was never able to afford the study previously, now she proudly holds the imaging result.

24-year-old patient with his endoscopy result, needed to follow up on a mass found in his stomach.
Biopsy was also performed and pending results.
