

TACOMA BAPTIST SCHOOLS

YOUTH Sports Participation Packet

IMPORTANT INFORMATION

These concussion, liability, medical emergency, and cardiac forms only need to be completed once a year!

These forms included coverage for all youth sports at Tacoma Baptist throughout the year.

The last page of the packet is a REFERENCE SHEET for you to keep at home as a parent/guardian. Please tear this form off before handing in the rest of the packet information.

FORMS TO TURN IN TO THE TBS ATHLETIC DIRECTOR:

- YOUTH Athletic Eligibility and Emergency Consent Form
- Liability Waiver
- Student/Parent Concussion Information Sheet
- Sudden Cardiac Arrest Awareness Form

*****These forms must be turned into the TBS Athletic Director, Beth Wing, before your child can participate in youth sports at Tacoma Baptist.**

TBS YOUTH Sports (1ST – 6TH)

Liability Release Form

For and in consideration of permission to participate in the recreation activity, I the undersigned participant (if over age 18) or parent or guardian (if participant is under 18) completely release and agree to indemnify and hold Tacoma Baptist Schools and its instructor and any other person, volunteer, or organization affiliated with Tacoma Baptist Schools in connection with this recreation activity harmless from and against any and all liability for any injury or damage from negligence or otherwise which may be suffered by the participant arising out of or in any way connected with this recreation activity. I realize that recreation activities have an inherent risk of physical injury. If the participant has any physical ailments or conditions that might affect his/her health by participating in the activity, I have consulted a physician or other medical authority and received permission to participate. If an injury occurs, I agree to use personal insurance to cover all medical expenses.

Concussion Sheet- Turn In to TBS

What can happen if my athlete keeps on playing with a concussion or returns too soon?

Athletes with the signs and symptoms of concussion should be removed from play immediately. Continuing to play with the signs and symptoms of a concussion leaves the young athlete especially vulnerable to greater injury. There is an increased risk of significant damage from a concussion for a period of time after that concussion occurs, particularly if the athlete suffers another concussion before completely recovering from the first one. This can lead to prolonged recovery, or even to severe brain swelling (second impact syndrome) with devastating and even fatal consequences. It is well known that adolescent or teenage athletes will often under report symptoms of injuries. And concussions are no different. As a result, education of administrators, coaches, parents, and students is the key for student-athlete's safety.

If you think your athlete has suffered a concussion –

Any athlete even suspected of suffering a concussion should be removed from the game or practice immediately. No athlete may return to activity after an apparent head injury or concussion, regardless of how mild it seems or how quickly symptoms clear, without medical clearance. Close observation of the athlete should continue for several hours. The new "Zachery Lystedt Law" in Washington now requires the consistent and uniform implementation of long and well-established return to play concussion guidelines that have been recommended for several years:

"a youth athlete who is suspected of sustaining a concussion or head injury in a practice or game shall be removed from competition at that time"

And

"...may not return to play until the athlete is evaluated by a licensed health care provider trained in the evaluation and management of concussion and received written clearance to return to play from that health care provider."

You should also inform your athlete's coach if you think that your athlete may have a concussion. Remember it is better to miss one game than miss the whole season. And when in doubt, the athlete sits out.

For current and up-to-date information on concussions, you can go to:

TACOMA BAPTIST SCHOOLS

Sudden Cardiac Arrest Awareness Form

Tacoma Baptist Schools believes in participation in athletics improves physical fitness, coordination, self-discipline, and gives student valuable opportunities to learn important social and life skills.

With this in mind, it is important that we do as much as possible to create and maintain an enjoyable and safe environment. As a parent/guardian or student you play a vital role in protecting participants and helping them get the best from sport.

Player and parental education in this area is crucial, which is the reason for the Sudden Cardiac Arrest Awareness pamphlet you received. Refer to it regularly.

This form must be signed annually by the parent/guardian and student prior to participation in Tacoma Baptists Schools athletics. If you have questions regarding any information provided in the pamphlet, please contact the athletic director.

I HAVE RECEIVED, READ, AND UNDERSTAND THE INFORMATION PRESENTED IN THE SUDDEN CARDIAC ARREST AWARENESS PAMPHLETS.

Concussion Information Sheet

REFERENCE SHEET FOR THE HOME

(Tear off this sheet & keep this information)

A concussion is a brain injury and all brain injuries are serious. They are caused by a bump, blow, or jolt to the head, or by a blow to another part of the body with the force transmitted to the head. They can range from mild to severe and can disrupt the way the brain normally works. Even though most concussions are mild, all concussions are potentially serious and may result in complications including prolonged brain damage and death if not recognized and managed properly. In other words, even a “ding” or a bump on the head can be serious. You can’t see a concussion and most sports concussions occur without loss of consciousness. Signs and symptoms of concussion may show up right after the injury or can take hours or days to fully appear. If your child reports any symptoms of concussion, or if you notice the symptoms or signs of concussion yourself, seek medical attention right away.

Symptoms may include one or more of the following:

- | | |
|---|--|
| <ul style="list-style-type: none">➤ Headaches➤ “Pressure in Head”➤ Nausea or vomiting➤ Neck pain➤ Balance problems or dizziness➤ Blurred, double or fuzzy vision➤ Sensitivity to light or noise➤ Feeling sluggish or slowed down➤ Feeling foggy or groggy➤ Drowsiness➤ Change in sleep patterns | <ul style="list-style-type: none">➤ Amnesia➤ “Don’t feel right”➤ Fatigue or low energy➤ Sadness➤ Nervousness or anxiety➤ Irritability➤ More emotional➤ Confusion➤ Concentration or memory problems (forgetting some plays)➤ Repeating the same question/comment |
|---|--|

Signs observed by teammates, parents, and coaches include:

- Appears dazed
- Vacant facial expression
- Confused about assignment
- Forgets plays
- Is unsure of game, score, or opponent
- Moves clumsily or displays incoordination
- Answers questions slowly
- Slurred speech
- Shows behavior or personality changes
- Can’t recall events prior to hit
- Can’t recall events after hit
- Seizures or convulsions
- Any change in typical behavior or personality
- Loses consciousness

Sudden Cardiac Arrest

Information Sheet for

Student-Athletes, Coaches and Parents/Guardians

SSB 5083 ~ SCA Awareness Act

What is sudden cardiac arrest? Sudden Cardiac Arrest (SCA) is the sudden onset of an abnormal and lethal heart rhythm, causing the heart to stop beating and the individual to collapse. SCA is the leading cause of death in the U.S. afflicting over 300,000 individuals per year.

SCA is also the leading cause of sudden death in young athletes during sports

What causes sudden cardiac arrest? SCA in young athletes is usually caused by a structural or electrical disorder of the heart. Many of these conditions are inherited (genetic) and can develop as an adolescent or young adult. SCA is more likely during exercise or physical activity, placing student-athletes with undiagnosed heart conditions at greater risk. SCA also can occur from a direct blow to the chest by a firm projectile (baseball, softball, lacrosse ball, or hockey puck) or by chest contact from another player (called "commotio cordis").

While a heart condition may have no warning signs, some young athletes may have symptoms but neglect to tell an adult. If any of the following symptoms are present, a cardiac evaluation by a physician is recommended:

- Passing out during exercise
- Chest pain with exercise
- Excessive shortness of breath with exercise
- Palpitations (heart racing for no reason)
- Unexplained seizures
- A family member with early onset heart disease or sudden death from a heart condition before the age of 40

How to prevent and treat sudden cardiac arrest? Some heart conditions at risk for SCA can be detected by a thorough heart screening evaluation. However, all schools and teams should be prepared to respond to a cardiac emergency. Young athletes who suffer SCA are collapsed and unresponsive and may appear to have brief seizure-like activity or abnormal breathing (gasping). SCA can be effectively treated by immediate recognition, prompt CPR, and quick access to a defibrillator (AED). AEDs are safe, portable devices that read and analyze the heart rhythm and provide an electric shock (if necessary) to restore a normal heart rhythm.

Remember, to save a life: recognize SCA, call 9-1-1, begin CPR, and use an AED as soon as possible!

Cardiac 3-Minute Drill

1. RECOGNIZE

Sudden Cardiac Arrest

- Collapsed and unresponsive
- Abnormal breathing
- Seizure-like activity

2. CALL 9-1-1

- Call for help and for an AED

3. CPR

- Begin chest compressions
- Push hard/ push fast (100 per minute)

4. AED

- Use AED as soon as possible

5. CONTINUE CARE

- Continue CPR and AED until EMS arrives
